OSMAN GROUP

A group of companies founded by Eng. Osman Ahmed Osman in 1975. OG is involved in several industries including construction, real estate, manufacturing, trade, agriculture, information technology, and logistics. Although based in Egypt, OG conducts a great deal of business overseas in MENA region and USA.

MISSION

OG mission as a business organization is to serve a wide sector of the corporate and government businesses, specifically in the Middle East, as well as the global community.

OG provide a wide range of products and services that include construction, building materials, gypsum products, insulation products, agriculture, information technology, and trading.

OG aim to achieve the maximum satisfaction of our customers by providing them with cutting edge technologies tailored to meet their goals, while strictly abiding to health, safety, and environmental standards.

OGTech an affiliate of the acclaimed Osman Group, is specialized in providing RFID solutions. We played a significant role in introducing Radio Frequency Identification (RFID) technology to the Middle East and North Africa (MENA) region.

OGTech offers customizable RFID solutions, combining the latest top-quality and hardware available on the market and state-of-the-art software developed by our in-house programming pioneers, which allow businesses to fully utilize various ventures. We take pride in being an RFID market leader in the region.

We deliver effective product development and project management to guarantee successful integration of our technology. We provide end-to-end solutions from system design to implementation to after sales services, in order to ensure customer satisfaction.

Since our establishment in 2007, OGTech has been focused on quality, innovation and combining the highest competences of our international partners.

MISSION

We aspire to provide innovative cutting edge RFID solutions, exceeding our clients' expectations in quality, optimization and service.

VISION

We provide innovative cutting edge integrated solutions to ensure that technology remains an asset not a problem.

RFID

RADIO FREQUENCY IDENTIFICATION

RFID is a wireless form of identification technology that uses radio waves to read and capture information stored on a tag that is usually attached to an object. RFID technology has become the standard technology used worldwide when it comes to automatic identification and data capture due to its accuracy, applicability, durability, and simplicity. OGTech offers a wide variety of RFID applications from warehouse management to access control systems. RFID applications are endless in the sense that new implementations are being discovered all the time. We work towards helping our clients manage business operations smoothly and efficiently by customizing a solution to suit their specific needs.

HOW IT WORKS

Data is encoded on and read from RFID tags by an RFID reader using radio waves. An RFID reader transmits radio waves that revive the tag and provide the power for the tag to respond to the reader.

The data is then converted by the reader to digital information. The figure below shows the components

Radio waves that transfer the data between the reader & the tagged items

Reader that converts radio waves into digital information

RFID tags placed on items needed to be identified

Antenna that captures the tag ID number

A software that controls the application & generates powerful reports

OUR PARTNERS & SUPPLIERS

Listed below are our esteemed international hardware partners & suppliers. They play a significant role in ensuring that our solutions deliver the promised successful outcomes, on account of their dedication to quality

A German company founded in 1970. FEIG Electronics has a wide experience in the field of electronics manufacturing with special focus on the RFID devices. FEIG Electronics had the opportunity to be from the main partners in the project of operating the national IDs with the RFID technology for Germany.

- More than 300 employees with more than 70 engineers located in Weilburg
- Development and sales of standard- and customized products
- OEM supplier for system- and components manufacturers, integrators and reseller
- Lean & In-House Production
- Application of the latest automated testing facilities before delivery

An American company founded in 1950. The worldwide pioneers in smart stickers, regardless of their application. Makes use of a wide range of materials to ensure ID products are durable and of the highest quality for their respective applications.

South Korean company Specialized and pioneer in manufacturing the hand-held RFID readers with the latest technology.

An American company that manufactures and sells marking, tracking and computer printing technologies. Its products include thermal barcode label and receipt printers, RFID smart label printers/encoders/fixed & handheld readers/antennas, and card and kiosk printers that are used for barcode labeling, personal identification and specialty printing principally in the manufacturing supply chain, retail, healthcare and

American company with more than 55 years' experience in innovative ID solutions serving the Healthcare, Leisure and Entertainment.

Honeywell invents and manufactures technologies that address some of the world's most critical challenges around energy, safety, security, productivity and global urbanization. They are uniquely positioned to blend physical products with software to support connected systems that improve buildings, factories, utilities, and aircraft, and that enable a safer, more comfortable and more productive world. their solutions enhance the quality of life of people around the globe and create new markets and even new industries.

Our technology creates added value through products that solve relevant problems. But it's not the technology that is paramount...it's the way that people use it. Therefore, we strive to incorporate the very latest technologies in creative, innovative ways. Your BIOMETRICS is your ID Relevant, elegant and user-friendly. Our technology creates added value through products that solve relevant problems. ... Therefore, we strive to incorporate the very latest technologies in creative, innovative ways.

Global New & Different
SMARCOM

SMARCOM, established since 2003, have kept going forward to develop and produce new products and solutions, which are all based on AUTO ID and Card Technologies. As a global market player of AUTO ID and Car Park Control System, SMARCOM are specialized in developing and manufacturing (Barcode modules/solutions, RF encoders/solutions, Magnetic modules/solutions and Web-based Car Park Management & System)

M3 MOBILE
Your Best Mobile Business Partner

During last 20years Market is fed up with a few suppliers. Now, M3Mobile is opening a new horizon for the world Enterprise Market. We are global leaders in the design and build of high quality handheld computers for businesses who need to manage their data on the move. All Kind of Barcodes and RFID signal, We can manage anything rapidly

CHAINWAY

As a leading "Internet of Things" company in China, Shenzhen Chainway Information Technology Co.,Ltd is a professional provider of products and solutions of RFID, barcode and biometrics technologies. They are dedicated to helping clients of all industries enhance efficiency, maximize productivity and reduce operational cost.

Home Automation Solution

OUR SOLUTIONS

FAMS

FAMS is an RFID powered *fixed assets management system* that drastically simplifies asset tracking and management. Our hardware helps you locate assets instantly, while our software aids in asset management, as we design it specifically to cater to your specific requirements. The combination of our high quality hardware and customizable software allows you to optimize your prolonged inventory process, by making it more time and cost efficient.

The figure below demonstrates the mechanism of our **FAMS**.

RFID Tag attached to an asset

Mobile and/or fixed RFID reader reads the data encoded on the RFID Tag

FAMS software tracks all assets and generates powerful reports

SOLUTION BENEFITS

- Minimize Errors
- Search & Locate Tagged Items Easily
- Business Intelligence
- Time Efficiency
- Efforts reconciliation
- Facilitate Frequent Audit Cycles
- Increase Productivity
- Generate Reports

Pro Patrol

Pro Patrol is an RFID powered application that handles patrolling process on specific checkpoints, which is mainly composed of the *Pro Patrol* software, the RFID hand-held readers and the RFID tags. It is designed for the evaluation and reporting of the patrol data.

The figure below demonstrates the mechanism of *Pro Patrol App*.

File Tracker

RFID File tracker is a UHF tracking and locator system used to track and locate documents and assets anywhere in the office, which reduce the physical, mental and cost challenges involved with managing security regulations.

The figure below demonstrates the mechanism of *File Tracker*.

RFID tagged files

Portable and/or fixed RFID reader

File Tracker software

Solution Benefits

Security

Reduce Cost & Effort

Recording Data

Monitoring

Generate Reports

Search & Locate Tagged Files Easily

Book App

Book App is an RFID powered library management system that enables you to optimize library operations. Libraries often face many problem due to lost, misplaced or stolen books. RFID aids in providing the location and data pertaining to each book.

The figure below demonstrates the mechanism of **Book App**.

RFID tagged book

Portable and/or fixed RFID reader

Book App software

Minimize Errors

Search & Locate Tagged Books Easily

Anti-theft Detection

Enhance Operations

Generate Reports

Supply Chain

Supply Chain Management System is an RFID powered application that allows for end-to-end supply chain visibility. It allows you to keep track of all manufactured items from line of production, warehouse to retail stores. RFID in supply chain management is the best way to optimize your operations in order to maximize productivity.

Warehouse

The figure below demonstrates the mechanism of *Supply Chain Management System*.

Solution Benefits

Minimize Errors

Generate Reports

Recording Data

Anti-theft Detection

Reduce Cost & Effort

Home Automation Solution

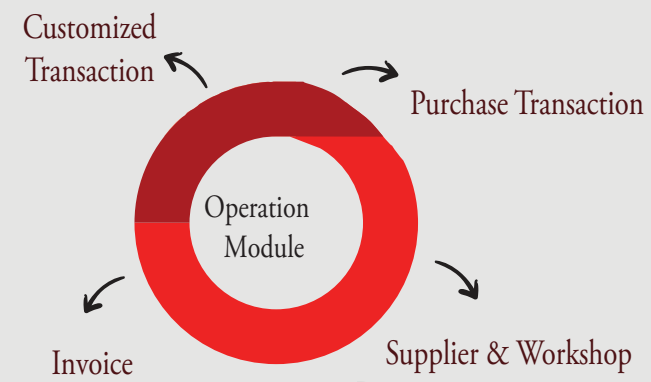

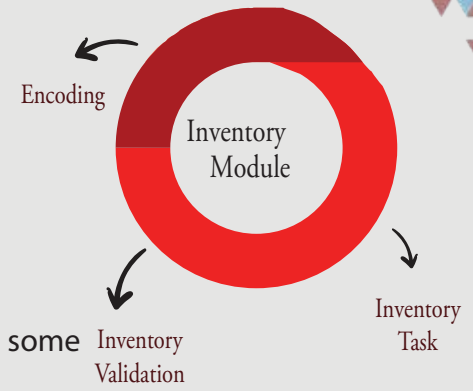

Jewelry Management System

JMS is a web-based software application developed in OGTech to manage the different transactions and operations that occur in a jewelry shop with the option to be supported with RFID technology in some of its modules

This project provides an effective managing platform to any Jewelry Shop for providing fast, reliable and comfortable service to the customers.

Weapon Tracking

Weapon Tracking is an RFID Tracking System that automates the management and tracking of the weapons in the ministries of defence and the ministries of interiors, providing fast inventory and location with a powerful reporting system.

OTHER SOLUTIONS

Card for All

One Card for All is an RFID powered application that is designed mostly for hotels and resorts. It allows the facility to streamline their operations and facilitates guest activities by simply allowing them to experience hotel facilities at a superior level by using RFID wristband or card to gain access to their room, designated areas and even allows them to make purchases in the hotel. This wristband/card can be used to access in-room safes, gym, lockers, health club facilities, business centers and so on.

PEOPLE

OUR SOLUTIONS

Secured Student

Card for All

Access Control

My Employee

My Employee is an HR software system which is powered by RFID attendance control system that allows you to monitor Punctuality & attendance while simultaneously keeping records of each employee. Also the system can generate customized & General reports. Because My employee Matters.

The figure below demonstrates the mechanism of *MY EMPLOYEE*

RFID card and/or wristband individuals carry it

Customer Satisfaction

Secured Student App

RFID powered **Secured Student App**. ensure full monitoring of students during school hours through four modules :

The figure below demonstrates the mechanism of *Secured Student App*.

School Entrance Module

Secured Student App. gives us safety, full access control and automatic organized time attendance. Link your Secured Student App. with your own school entrance, school hours and employees payroll.

Cashless Break Module

Secured Student App. handle all our students activities with no headache or danger. Cashless payment gives us the high extinct way to satisfy student needs. No worries about theft or misuse.

Bus Module

Make safe full monitored trip from home to school to home again with the synergy of RFID and GPS we have acute record about the time and location of students the whole route.

Classroom Module

Secured Student App. takes care of your student through your supervision time. Calm down and monitor each and every step of your students classroom, library, laboratory, mosque, church and playing area.

Solution Benefits

- Generate Reports
- Identification
- Profitability
- Monitoring
- Security
- Privacy

VEHICLES

OUR SOLUTIONS

Smart Traffic

Smart Gate

Smart Parking

Smart Parking

Smart Parking System is an RFID powered application that easily manages parking lots and helps the vehicle drivers to locate an empty place to park and also find their vehicle through :

- 1 Readers
- 2- Identification tags
- 3 ANPR cameras

- 4 Automatic ticketing
- 5- Billing station
- 6 Guidance system and many other accessories

Solution Benefits

Security

Save Time

Real Time
Visibility

Improve
Customer Service

The figure below demonstrates the mechanism of **Smart Parking**.

Smart Traffic

Smart Traffic is a solution for better traffic management that includes different road types, high way roads, bridges and tunnel. The solution guarantees a safe and fully automated tolling for vehicles on speed of more than 200km/hour, it also provide a facility of identifying the nearest emergency vehicle and real time notifications of road incidents .

Solution Benefits

Easy Tolling
Credit/Debit

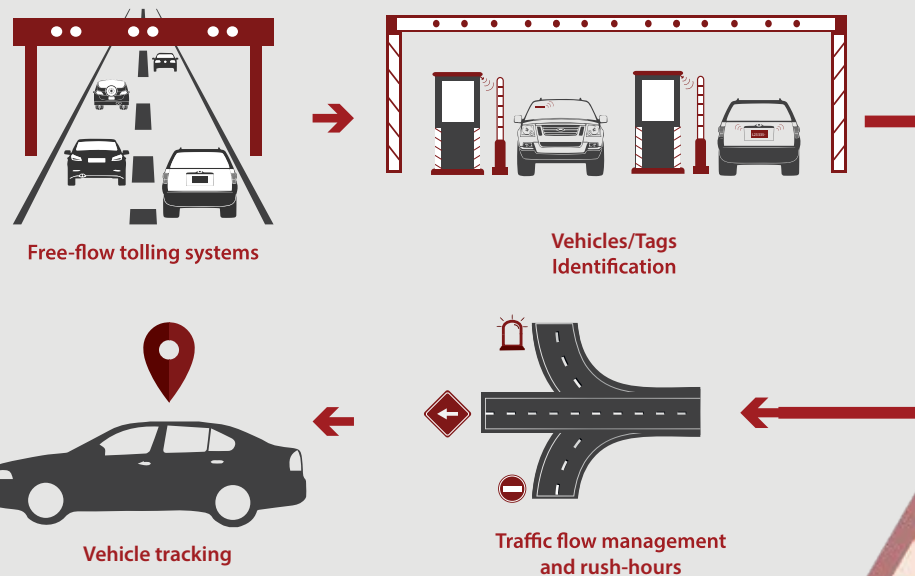

Eliminate
The Risk Of Accident

No Traffic Jam

The figure below demonstrates the mechanism of *Smart Traffic*.

Smart Gate

Smart Gate is an RFID powered vehicle access control application that allows users to enter a designated area through automatic identification. Our application also comprises a data capture ability that enables executives to better manage the designated area, whether it's a compound, mall or administrative building.

The figure below demonstrates the mechanism of **Smart Gate**.

Solution Benefits

- Marketing Tool
- Identification
- Profitability
- Security
- Distinction
- Applicability
- Privacy

Easy In

Secure, convenient, and easy way to control and manage your facility access for both residents and visitors. In addition to managing your facility requests with a click away, providing the simplest experience while being on-top of all movements.

Is providing a robust mobile application for end-user with a friendly interface backend control panel for the facility using highly secured QR code access system, by a press of a button, residents can send invitation to their families and friends choosing the proper time and data, granting a very personalized access to the invitee only in the scheduled time. Availing a communication channel with the facility management in an easier and much efficient way through the application.

MEGA PROJECT BRIEF

United Arab Emirates Ministry of Health:

وزارة الصحة

MINISTRY OF HEALTH

OGTech provided FAMS solution with RFID devices that facilitated the inventory process for the whole assets. The solution covered up to 1 million assets and the event was published in the RFID Journal as one of the biggest RFID applications in the Gulf area.

Qatar Public Prosecution:

Mega office in Doha has launched what it bills as the largest RFID-enabled file-tracking deployment in the world. With 1,006 read points spread across a 46-story tower, the system enables the office to track the movements and locations of 70,000 files down to a particular corridor, office or stairwell.

RFID Journal Article: <http://www.rfidjournal.com/articles/view?17456>

MEGA PROJECT BRIEF

Elsewedy Electric:

In most of Elsewedy Electric factories, there are four main areas – raw materials, production/ sub-assembly, quality and finally, the finished product. OGTech is covering these steps in up to 26 factories with target to accomplish the project by 2021

Bibliotheca Alexandrina:

OGTech provided Book app solution, including library management system to track and identify books. The solution is operated by RFID for more than 1,200,000 books in order to prohibit the stealth and loss of book and provides an easy experience for borrowing books.
